Zenith06

Simple and efficient, everything you need.

You need accurate results without having to invest in expensive and complex equipment? GeoMax has a solution: the Zenith06 smart antenna with X-PAD field software.

This simple rover and intuitive field software eliminate the need for extensive training to produce reliable outcomes. The software has an intuitive workflow, developed side by side with the customer, which allows for quick familiarisation. The maintenance for X-PAD field software comes at no extra cost and an active X-PERT service will grant access to X-PAD improvements.

With its compact, lightweight design, the Zenith06 is easy to carry in the field and gentler on your body.

^{*} Measurement precision, accuracy, reliability and time for initialisation are dependent upon various factors including number of satellites, observation time, atmospheric conditions, multipath etc. Figures quoted assume normal to favourable conditions. A full Galileo constellation will further increase measurement performance and accuracy.
